

Practica SQL Avanzado, ETL y SQL Avanzado, ETL y DataWarehouse

Ejercicio 1

Diseñe mi modelo con una cardinalidad 1:1, ya que creo que es la que da una visión sencilla y clara, en la cual los bootcamps tienen alumnos los cuales asisten a los modulos y cada modulo tiene su profesor, lo realice así ya que los alumnos que llevan un bootcamp llevarán los mismos modulos luego con esto evito redundancia y mejoro la integridad y bueno al final las relaciones de acuerdo al orden de las entidades es decir las claves primarias

Ejercicio 2

```
CREATE TABLE Bootcamps (  
    bootcamps_id SERIAL PRIMARY KEY,  
    tipo VARCHAR(100),  
    start_date_bootcamp DATE NOT NULL,  
    end_date_bootcamp DATE NOT NULL,  
    alumnos_id INT NOT NULL  
);  
  
CREATE TABLE Alumnos (  
    alumnos_id SERIAL PRIMARY KEY,  
    nombre VARCHAR(100) NOT NULL,  
    apellido VARCHAR(100) NOT NULL,  
    enrollment_date_alumnos DATE NOT NULL,  
    modulos_id INT NOT NULL,  
    bootcamps_id INT,  
    FOREIGN KEY (bootcamps_id) REFERENCES Bootcamps(bootcamps_id)  
);  
  
CREATE TABLE Modulos (  
    modulos_id SERIAL PRIMARY KEY,  
    tipo VARCHAR(100) NOT NULL,  
    start_date_modulo DATE NOT NULL,  
    end_date_modulo DATE NOT NULL,  
    profesores_id INT NOT NULL,  
    alumnos_id INT,  
    FOREIGN KEY (alumnos_id) REFERENCES Alumnos(alumnos_id)  
);  
  
CREATE TABLE Profesor (  
    profesor_id SERIAL PRIMARY KEY,  
    nombre VARCHAR(100) NOT NULL,  
    apellido VARCHAR(100) NOT NULL,  
    enrollment_date_profesor DATE NOT NULL,  
    modulos_id INT,  
    FOREIGN KEY (modulos_id) REFERENCES Modulos(modulos_id)  
);
```

Ejercicio 3

```
CREATE OR REPLACE TABLE keepcoding.ivr_detail AS
SELECT calls.ivr_id
      , calls.phone_number
      , calls.ivr_result
      , calls.vdn_label
      , calls.start_date
      , calls.end_date
      , calls.total_duration
      , calls.customer_segment
      , calls.ivr_language
      , calls.steps_module
      , calls.module_aggregation
      , modules.module_name
      , modules.module_duration
      , modules.module_result
      , steps.module_sequece
      , steps.step_sequence
      , steps.step_name
      , steps.step_result
      , steps.step_description_error
      , steps.document_type
      , steps.document_identification
      , steps.customer_phone
      , steps.billing_account_id
      , FORMAT_DATE('%Y%m%d', start_date) AS calls_start_date_id,
      FORMAT_DATE('%Y%m%d', end_date) AS calls_end_date_id,
FROM practica-keep-coding.keepcoding.ivr_calls as calls
LEFT
JOIN practica-keep-coding.keepcoding.ivr_modules as modules
ON calls.ivr_id = modules.ivr_id
LEFT
JOIN practica-keep-coding.keepcoding.ivr_steps as steps
ON calls.ivr_id = steps.ivr_id;
```

Ejercicio 4

create or replace table keepcoding.ivr_summary AS

```
SELECT  detail.ivr_id
        , detail.phone_number
        , detail.ivr_result
        , detail.vdn_label
        , detail.start_date
        , detail.end_date
        , detail.total_duration
        , detail.customer_segment
        , detail.ivr_language
        , detail.steps_module
        , detail.module_aggregation
        , detail.module_name
        , detail.module_duration
        , detail.module_result
        , detail.module_sequece
        , detail.step_sequence
        , detail.step_name
        , detail.step_result
        , detail.step_description_error
        , detail.document_type
        , detail.document_identification
        , detail.customer_phone
        , detail.billing_account_id
        , CASE WHEN detail.module_aggregation = 'AVERIA_MASIVA' THEN 1 ELSE 0 END AS
masiva_lg,
        CASE WHEN detail.step_name = 'CUSTOMERINFOBYPHONE.TX'
              AND detail.step_description_error = 'UNKNOWN'
        THEN 1
        ELSE NULL
        END AS info_by_phone_lg,
        CASE WHEN detail.step_name = 'CUSTOMERINFOBYDNI.TX'
              AND detail.step_description_error = 'UNKNOWN'
        THEN 1
        ELSE 0
        END AS info_by_dni_lg,
        CASE WHEN (
          SELECT COUNT(*)
          FROM keepcoding.ivr_detail as previous_calls
          WHERE previous_calls.phone_number = detail.phone_number
          AND TIMESTAMP_DIFF(detail.start_date, previous_calls.end_date, HOUR) <= 24
        ) > 0 THEN 1 ELSE 0 END AS repeated_phone_24H,
        CASE WHEN (
          SELECT COUNT(*)
          FROM keepcoding.ivr_detail as future_calls
          WHERE future_calls.phone_number = detail.phone_number
          AND TIMESTAMP_DIFF(future_calls.start_date, detail.end_date, HOUR) <= 24
        ) > 0 THEN 1 ELSE 0 END AS cause_recall_phone_24H,
FROM practica-keep-coding.keepcoding.ivr_detail as detail
```

Ejercicio 5

```
CREATE FUNCTION keepcoding.clean_integer(dato INT64) AS (  
  IFNULL(dato, -999999));
```
